China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

Renewable energy projects, such as solar power plants, have been built in western regions of China where many native nomadic people have had their land taken away.

China has significantly increased its coal power capacity, reviving concerns about its climate-changing carbon emissions.

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green and low-carbon transformation of its energy ...

The massive growth in wind and solar begs the question: Why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

China continues to install solar and wind power at a record pace, with 1.3 TW of utility-scale solar and wind capacity in development, of which 510 GW is under construction, according to a ...

By the first quarter of 2024, China's total utility-scale solar and wind capacity reached 758 GW, though data from China Electricity Council put the total capacity, including distributed solar, at ...

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy breaks further records with its rapid buildup of...

Wind and solar are booming in China. So why is it building so many new coal plants? A power plant is seen near Shenyang in northwestern China's Liaoning province on Jan. 3, 2026.

China is leading the world in new solar and wind installations and doing so at a record-shattering pace. In May

China Wind and Solar Power Plant

2025 alone, the country added 93 gigawatts of solar capacity, or nearly 100 ...
