-----

The invention realizes the signal synchronization between the satellite-borne base station and the ground base station, and the terminal can realize resynchronization through a simple...

To solve this problem, we propose a reference path-based CoISAC inter-BS synchronization scheme. By simulating and testing on the online experimental platform, the proposed ...

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network (ADN) and constructs a description ...

It also elaborates on how inverters connect to communication platforms and different ways to implement communication between the inverter and third-party platforms.

Beginning by reviewing the work on coexisting communication and radar systems, we highlight their limits on addressing the interference problem, and then introduce the JCAS technology.

A Novel Communication Strategy for Decentralized Control of Paralleled Multi-Inverter Systems suggests the method of synchronization of three inverters. For this method, the common mode ...

Can inverter stability be improved in power stations? This work provides a feasible solution for enhancing inverter stability in power stations, contributing to the reliable integration of renewable ...

In the first strategy, called the output-sync method, an incoming inverter is synced to the microgrid, and then the circuit breaker is closed for power-sharing.

This article aims to reduce the electricity cost of 5G base stations, and optimizes the energy storage of 5G base stations connected to wind turbines and photovoltaics.
