Should you buy a portable generator or an inverter?

If you just want a generator to power household appliances during short power outages, a portable generator will likely work fine and save you some money. But if your power outages tend to be several days long, the efficiency of an inverter means you won't have to fill up the gas tank as often.

Are Inverter generators better than traditional generators?

When comparing performance, consider these key aspects: Noise Levels: Inverter generators typically operate at 50-60 decibels, while traditional generators often exceed 70 decibels. Portability: Inverter generators are generally more compact and lighter, though this may mean reduced power output compared to traditional generators.
