The research conducted a comprehensive techno-economic analysis and optimal design of a hybrid renewable energy system (HRES) integrated with grid connection, utilizing a case study ...

In this context, this study examines the energy and economic aspects of replacing 50% of the public passenger vehicle fleet, which currently relies on internal combustion engines, with electric ...

The review systematically examines the planning strategies and considerations for deploying electric vehicle fast charging stations.

The goal of this research is to study the technical and economic feasibility of the integration of photovoltaic solar power systems in two of the biggest Iraqi oil refineries:...

The goal of this research is to study the technical and economic feasibility of the integration of photovoltaic solar power systems in two of the biggest Iraqi oil refineries: ...

In order to maximize the social and economic benefits of fast charging service, this paper proposes a planning method of photovoltaic-storage fast charging station considering charging ...

Data and Tools Find NLR-developed data sets, maps, models, and tools used for the analysis of advanced energy technologies.

olutions becomes crucial. In this context, the first report published by IEA Task 17 Subtask 2 highlights the main requirements and feasibility conditions for maximizing the benefits of photovoltaic (PV) ...

Altogether, the proposed method provides a solid foundation for cost-effective and grid-friendly EV charging operations and can be further enhanced to meet the needs of large-scale deployment.

Cost Analysis of Fast Charging for Photovoltaic Containers in Oil Refineries

A report from energy think tank Ember details how cost reductions in battery storage technology are enabling dispatchable solar power to compete with conventional power ...
