The country has recognized the importance of energy storage in stabilizing its grid and maximizing the utilization of renewable energy, particularly wind and solar power.

In short: Solar power is a remarkable success in Australian households, but huge progress brings its own set of challenges for the existing energy grid.

We need the right technology to store enough renewable energy to meet our NEM needs, so we don't have to default to fossil fuel electricity production to fill the gap. A potential solution to this ...

However, this report has gone further by modelling the cheapest cost across the grid, including different power generation options, energy storage, transmission lines and gas backup.

Increasing gap between maximum and minimum operational demand in Australia call for urgent need of balancing storage technologies. Fast response hybrid battery-supercapacitor energy ...

A new report from the CSIRO has highlighted the major challenge ahead in having sufficient energy storage available in coming decades to support the National Electricity Market ...

Australia leads the world in solar, and we have reduced our emissions by 22 per cent from their peak in 2005, but to go further we need to solve the energy storage problem.

Around Australia, records are tumbling as rooftop solar production soars to new highs. Experts say the trend is pushing the grid to its limits and highlighting the urgent need for storage.

Australia runs a great risk of failing to meet its ambitious but achievable renewable energy goals, writes Stephanie Bashir, CEO of Nexa Advisory, who explains why utility-scale energy ...

Does australia need energy storage for solar power generation

Energy storage is the new frontier for the achievement of energy independence in Australia. With 4 million households and businesses sporting rooftop solar, and 4 million more ...
