I'm planning to use MCA-treated wood, which supposedly less toxic to metals (and people), particularly the aluminum in the panel frames; also, around here at least, it's easier to find ...

Installing wood planks between roof rafters, also known as "wood blocking," isn't as common a practice as it used to be in solar installation. The need for wood blocking has been ...

Install and label a 4" x 4" plywood panel area for mounting an inverter and balance of system components. Install a 1" metal conduit for the DC wire run from the designated array location to the ...

The wood must be thick enough to support the weight of the solar panels securely while being resilient to elements such as moisture and varying temperatures. Treated wood helps mitigate ...

That's exactly what happens when you pair photovoltaic panels installed on wooden roofs. While most people picture solar arrays on modern metal or tile roofs, wooden structures offer surprising ...

There are two of these rails for each of the sets of 3 panels. The rails are supplied by companies like IronRidge or Unirac. The front end of the rails are supported by a 6 by 6 treated ...

Treated lumber last a long time here, well over the 20 year life of the panels, and this is just a test setup - wood is easier to change up and doesn't require concrete.

When installing photovoltaic panels on one- and two-family homes, it's important to understand the requirements for access pathways and the requirements for setback from the ridge, ...

Proper solar panel grounding is key for passing your solar panel installation. Learn more about grounding requirements and mistakes to avoid.
