Dominica already has substantial geothermal, solar and wind power capacities making the island an ideal location for energy generation from these resources. Those looking to invest in renewable ...

Dominica has untapped hydropower, wind, geothermal and solar energy that the country could use to supply all its energy demands and even generate a surplus that could be exported.

The Caribbean island is building a power station that will use steam naturally heated by volcanic rock.

Dominica's policies have pushed for increasing renewable energy in the form of geothermal, solar, and hydro energy development.

Solar energy is another area of focus for Dominica, with several small-scale solar projects already in operation. In 2019, the government launched the Solar Street Lighting Project, which aims ...

Dominica, in the eastern Caribbean, is planning to join these pioneers and become the first small island developing State (SIDS) to stop using fossil fuels for energy generation. It's called ...

The goal of these projects is to build generation capacity to meet the increasing demand for energy nationally, while also reducing the Dominica Electricity Services Ltd. reliance on fossil ...

Dominica's electricity sector is currently challenged by outdated infrastructure, largely dependent on aging diesel generators which result in high electricity expenses and an unreliable ...

Once operational, it will power approximately 23,000 homes, marking a transformational step toward Dominica's goal of becoming the world's first climate-resilient nation.

Central to these efforts are developments in hydroelectric power operated by DOMLEC, geothermal energy
