This study investigates the integration of waste transparent glass bottles into hemispherical solar stills (HSS) to assess their effect on distillate productivity and thermal efficiency.

QUANTUM is a China-based global supplier of PVB, PDLC, TPU, EVA and other functional plastic thin films. It also distributes ultra-clear patterned solar glass as well as solar PV modules globally.

To investigate the influences of Al<sub>2</sub>O<sub>3</sub>-water nanofluid and the glass cover cooling technology by a water sprinkler on hemispherical solar distiller performance, three hemispherical ...

This study is intended to comparative and analyze the operational performances of the conventional hemispherical solar still (CHSS), hemispherical solar still with glass cover cooling...

This work focused towards an experimental investigation by comparing the performance of two solar still such as pyramid solar still and hemispherical solar still.

Hemispherical solar still has relatively better thermal performance than other types of solar stills due to the circular shape of the top cover, which permits the reception of solar radiation from all ...

In this experimental study, three hemispherical distillers were fabricated and tested under the same climate conditions at a 1-cm basin fluid depth, namely, conventional hemispherical solar still (CHSS), ...

In the present work, a hemispherical solar still (HSS) was experimentally designed and fabricated in order to investigate the effect of the addition of river rocks on the steady productivity of the still.

Three 0.1 m<sup>2</sup> hemispherical solar devices were utilized for the experimental study. The system was experimentally tested in three ways for consecutive days.

Two hemispherical solar stills were designed and built, and the production of each was compared to evaluate the impact of the proposed changes on the overall performance. The ...
