How to install solar panels?

Follow the following steps during the solar panel installation process. First, you should survey your property to identify the best place to install the panels. Remember, just because the sun hits an area of your rooftop or property doesn't mean it's the best spot. The pitch and direction of the roof affect the efficiency of the solar modules.

Where should new solar panels go?

It's clear that we need to see lots more solar energy being generated in this country, especially as fossil fuel imports have become so expensive. The real issue is where new solar panels should go. At CPRE we believe the best answer to this question is surprisingly simple - on our roofs.

Which countries have solar panels?

In contrast to the UK's approach, France has announced plans to fast track renewable energy by mandating car parks nationwide be covered by solar panels. And in 2020, 83% of newly installed solar capacity in Germany was on rooftops. Rooftops are the best place for solar panels for our landscapes and wildlife, too.

Should solar panels be on our roofs?

At CPRE we believe the best answer to this question is surprisingly simple - on our roofs. Having solar panels on the roofs of homes across the country would not only be a great way to reduce our reliance on fossil fuels. It could be a crucial part of the solution to the energy bills crisis that is hitting rural communities so hard.
