Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

Solar, wind and battery storage are forecasted to provide 99% of new electricity generating capacity in 2026 according to new data released by the Energy Information Administration.

A new analysis shared with The New York Times shows how countries around the world are rapidly adding solar and wind capacity, now cheaper and more reliable than ever.

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity. The Oasis de Atacama in Chile will be the ...

Energy storage additions in these two markets remain strong for now although recent policy changes slow new solar and wind in both markets. Energy storage installations globally will ...

Explore what 2025 holds for clean energy--from solar and wind growth to storage innovations and grid modernization. Key insights from FFI Solutions.

Welcome to the Global Solar Atlas. Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for ...

This growth highlights the importance of battery storage when used with renewable energy, helping to balance supply and demand and improve grid stability. Energy storage systems ...

Solar Resource Maps and Data Find and download resource map images and data for North America, the contiguous United States, Canada, Mexico, and Central America. Solar Supply ...

Interactive map Explore hundreds of our projects across the United States, spanning utility-scale wind, solar,

New Energy Storage Wind and Solar Map

and energy storage, community solar, and distributed energy.
