The law requires that 3,500 MW be mid-duration energy storage, 750 MW be long-duration, and, if commercially available at a reasonable cost, 750 MW should be multi-day energy ...

As the share of U.S. power generation from variable renewable energy (VRE) grows, a new vision is taking shape for long-duration energy storage (LDES) to ensure affordable and reliable electricity.

The Duration Addition to electricity Storage (DAYS) program will pursue new long-duration electricity storage (LDES) technologies with discharge durations that range from 10 to approximately 100 hours ...

New large-capacity, long-duration energy storage solutions are needed to ensure grid performance* with increasing intermittent renewables and threats that current ES technologies (e.g., pumped hydro, ...

An overview of Energy Storage Targets across 50 U.S. States, with state-by-state policy progress, key resources, and model rules.

The Battery Energy Storage System Guidebook contains information, tools, and step-by-step instructions to support local governments managing battery energy storage system ...

Two states have recently incorporated new requirements for long duration energy storage (LDES) - usually defined as ranging from 8-10 hours up to multiple days - in their targets.

Main Considerations for Safe Installation and Incident Response Battery Energy Storage Systems Overview
Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow ...

Consumers, utilities, and policymakers also consider storage "duration" or how long an energy storage system can continuously output its rated power. As of February 2025, twelve states ...
