In today's post, we will be building an Internet of Things (IoT) solar panel remote monitoring system using an Arduino board, a voltage sensor, and the Blynk IoT dashboard.

Using A Solar Panel Why Do We Need A Solar Regulator How It Works Calculating Charging Current For The Battery Solar Regulator with Adjustable Voltage and Current Output Solar Regulator Using IC LM324 We all know pretty well about solar panels and their functions. The basic functions of these amazing devices is to convert solar energy or sun light into electricity. Basically a solar panel is made up with discrete sections of individual photo voltaic cells. Each of these cells are able to generate a tiny magnitude of electrical power, normally ar... See more on [homemade-circuits](#)
