Hydropower generation has been an essential renewable energy resource for electricity generation, and it is expected to play a significant role in the transition to a sustainable, low-carbon ...

The Portuguese government plans to invest up to 400 million euros (\$466 million) to improve grid management and boost battery storage following a massive blackout across Spain and ...

StorSystems is driving the Portuguese energy transition by developing, building, and operating advanced battery storage systems. Battery storage allows power produced now to be stored for use ...

Portugal will launch a competitive tender for 750 MVA of battery energy storage before January 2026, as part of a broader EUR400 million package aimed at improving grid reliability and ...

This article briefly analyses the Portuguese regulatory framework for utility-scale energy storage technologies, in order to highlight the strategies that have been followed.

It aims to guide Portugal in defining its energy storage roadmap, offering independent data, technological assessments, and recommendations. It aligns with our core priority: transforming the ...

One of the new cabinet's priorities for its four-year term would be a national energy storage strategy for 2026 to accelerate investment in battery storage for wind and solar photovoltaic ...

Portugal's battery storage boom steadies prices, slashes blackouts and opens tech roles. Discover how new policies could reshape your power bill.

Welcome to Portugal, where energy storage isn't just tech jargon - it's becoming as common as pastéis de nata in Lisbon cafés. With solar farms sprawling across Alentejo and wind turbines dancing off the ...

Energy storage is therefore essential to meet European targets. Energy storage installed capacity in Portugal is still predominantly based on hydropower pumping, which is today over 3 GW, ...
