Although Samoa's global emissions are minimal, the report confirms the country is already experiencing serious climate impacts. Local adaptation efforts also include community-led risk ...

In transport, Samoa has taken its first steps towards decarbonisation by introducing electric vehicles, piloting charging infrastructure, and developing a national clean mobility strategy.

Samoa submitted its second NDC in July 2021. Samoa's second NDC replaced the sectoral targets in its initial NDC with an absolute economy-wide reduction target of reducing total greenhouse gas (GHG) ...

Our commitments, to reduce national emissions by 104.11 Gg CO₂e by 2035, to expand our forest and mangrove cover, to strengthen food security, and to mainstream gender equality, are anchored in a ...

The UNDP Climate Action Pathways for Island Transport (CAP-IT) project supports Samoa's goals by promoting a low-emission transport system that is inclusive, accessible, and ...

By committing to reducing its carbon footprint, Samoa has set ambitious targets for lowering greenhouse gas emissions, aiming to decrease emissions by 27% from 2015 levels by the ...

The Government of Samoa has adopted a Low Emissions Development Strategy (LEDS) for the period 2020-2030 to promote low carbon development pathways with a target of 70% Renewable Energy ...

Samoa's latest greenhouse gas emissions are very small in absolute terms, at about 0.17 megatonnes of CO₂-equivalent. A strong land-use and forestry sink more than offsets fossil CO₂, ...

A \$40 million plan to promote green transformation in Samoa and reduce emissions was launched on Tuesday. The Decarbonisation Strategy and the Samoa Land Use and Mobility Plan for ...
