Why is lithium battery important for telecom sites?

27White Paper on Lithium Batteries for Telecom Sites With the rapid expansion of network and the explosive growth of application,the demand for network stability and reliabilityis increasing. The ESS for telecom sites is a crucial infrastructure for the network,and its reliability is critical.

How to ensure a stable operation of lithium batteries?

To ensure the stable operation of lithium batteries,comprehensive,all-scenario tests shall be conducted,and lithium batteries shall pass various internationally recognized certification. See Recommendation ITU-T L.12216,which contains a description of information on possible stress tests and results. 4.

What are the safety risks in communication lithium battery systems?

Electrical hazardsare among the most frequent safety risks in communication lithium battery systems. During installation,lithium batteries may face abnormal conditions such as wiring errors,poor screw fastening,and foreign object invasion. During use,they may encounter environmental damage such as condensation,water ingress,and ant invasion.

How to eliminate safety risks of lithium batteries at telecom sites?

Manufacturing high-quality lithium batteriesis the only way to eliminate safety risks of lithium batteries at telecom sites. The telecom industry shall strengthen the supervision and control over the quality of lithium batteries and promote the development of dedicated safety standards and technical specifications.
