Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.

How much do solar panels cost on average? As of 2026, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 ...

Table 1 represents our assessment of the cost to develop and install various generating technologies used in the electric power sector. Generating technologies typically found in end-use applications, ...

The U.S. Department of Energy's solar office and its national laboratory partners analyze cost data for U.S. solar photovoltaic systems to develop cost benchmarks to measure progress towards goals and ...

The purchase price of the generated electricity is typically at, or slightly below, the retail electric rate the host customer would pay its utility service provider.

NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems.

Historic Low Pricing: Solar costs have reached unprecedented lows in 2025, with systems ranging from \$2.50-\$3.50 per watt installed, making the technology more accessible than ever before.

Solar prices across the world's most active residential, utility, and commercial PV (Photovoltaics) markets.

Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or other system components. Prices are compiled from three sources: Nemet ...

Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or

other system components. Prices are ...

Overall, our analysis shows that PPA prices are not expected to decrease significantly in the foreseeable future. While some inputs are stable or potentially improving--such as record-low ...
