---

Find up-to-date statistics and facts on the global solar photovoltaic industry.

With deployment surging across key markets and China's rapid scale-up pushing global installations to new highs, 2025 is on track to become another historic year for solar power. The ...

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (&lt;1 ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

Global solar installations reached nearly 600 GW - an impressive 33% increase over the previous year - setting yet another record. Solar accounted for 81% of all new renewable energy ...

A comparison of the solar power status among countries and territories has been provided, considering their concentrated solar power and PV installed capacities for each continent.

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Wind energy Onshore wind energy Offshore wind energy Solar energy Solar photovoltaic Concentrated solar power Bioenergy Solid biofuels and renewable waste Renewable municipal ...

On the basis of analysis of the four factors that impact the development of China's PV power generation, including solar-energy resources in China, PV industry ...
