What is a split-type solar street light pole?

A Split-type solar street light pole is usually more than 5m in height with high gravity center while its solar panels are designed in hanging type to make the whole equipment set more wind resistant. Split solar street light's cost varies according to its materials, poles, and installation.

How much does a split solar street light cost?

The split solar street light installation process is more complex since it demands more planning than all-in-one designs. In split systems, each component must be purchased and installed separately. So, the overall all-in-one solar LED street light price, even for a low-power option, can increase by 30-40%, starting from at least \$60-70.

What are the different types of solar street lights?

Previous classifications, including solar LED street light, all-in-one, all-in-two, and split systems, describe the internal configuration of the solar street light itself, independent of how it's mounted. They refer to how the system pre-arranges its components - solar panel, battery, LED light fixture, and controller.
