-----  
What is a steel container frame?

Container Structure The steel container frames consist of welded steel profiles with reinforced container corners. A fully galvanized frame, along with roof and floor supports, significantly enhances durability and serves as the basis for necessary stability. Additionally, for secure transport with heavy equipment, there are forklift pockets.

What is a high quality flat pack container frame?

frame higher quality flat pack container frame is using complex lifting points and bigger column than economic flat pack container frame Top frame Main frame: 160mm high 2.3mm thickness galvanized steel + painting Secondary frame: galvanized 100\*40\*1.0 C shape steel and 30\*30\*1.0mm tube steel Bottom frame

What is the standard size of a container frame?

The container frames are manufactured to the ISO standard size of length 6,058 mm x width 2,438 mm x height 2,800 mm, ensuring maximum compatibility with other modules in further expansion. Upon request, the frames are also available in the standard width of 3 meters. A verifiable static type forms the central basis for further expansion planning.
