---

While the concept might seem futuristic, the answer is a qualified yes: animals can be used to generate electricity, though widespread, practical application remains a significant challenge.

Oriental Hornets have pigments in yellow tissues that trap light, while brown tissues generate electricity - and they are the only known animal that can convert sunlight into energy. Scientists aren't sure ...

The oriental hornet has built-in "solar cells" that generate electricity from sunlight--a first in the animal kingdom, according to a new study.

While not directly "solar-powered" in the sense of generating energy, the American alligator depends heavily on solar radiation to maintain its body temperature.

Solar energy is radiation from the Sun that is capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is ...

I recently learned about a bizarre animal known as the Emerald Sea Slug, *Elysia chlorotica*, and I was fascinated by the ways this tiny creature blurs our expectations of what ...

What is the name of the animal that charges with solar energy? The animal that charges with solar energy is called a solar-powered tortoise, known scientifically as the "Aldabra Giant ...

Four animals that make use of solar energy are a sea slug known as the eastern emerald elysia, an animal called the mint-sauce worm, an insect called the oriental hornet, and the embryos ...

The sun shines on the hornet's exoskeleton and most of the energy is absorbed and turned into electricity. Oriental hornets are the only member of the animal kingdom we know of that can use ...

# The animal that uses solar energy to generate electricity is

Electric rays or sting rays (Order: Torpediniformes) is a group including over 60 species who possess special organs, imaginatively called electric organs, which are capable of generating ...
