This is the world's first deployment of a commercial 5G liquid-cooled base station solution, demonstrating Nokia's firm commitment to sustainable development and climate change.

Ideal for power grid peak regulation, renewable energy storage, telecom base stations, and off-grid projects, adapting to diverse energy needs.

Studies show that 5G base stations using liquid cooling systems can reduce the energy consumption of refrigeration systems by 30%-50% compared to air-cooled base stations,

This breakthrough technology, by using liquid cooling rather than traditional air cooling, effectively responds to the challenges of the surge in power consumption of base ...

Now we have demonstrated the world's first liquid-cooled AirScale 5G base station in commercial operations, making liquid cooling a reality for all network generations.

The project features a 2.5MW/5MWh energy storage system with a non-walk-in design which facilitates equipment installation and maintenance, while ensuring long-term safe and reliable operation of the ...

High energy density, highly integrated components, saving over 30% of space. Grid-friendly, actively supportive, rapid response. Comprehensive monitoring, cloud-edge collaboration, swift fault ...

The liquid cooled system is equipped with a circulation pump based on the resistance of the water circuit and battery packs to ensure that the liquid flow through each liquid-cooled battery pack is ...

On June 3, Nokia announced in Espoo, Finland, that its 5G AirScale liquid-cooled base station solution has helped Finnish mobile operator Elisa to reduce the potential energy costs of its ...

The wind power of the communication base station is 5MWH liquid-cooled

The 5MWh Liquid-Cooled Energy Storage Container is a high-capacity, modular energy storage solution designed to enhance grid stability, optimize energy use, and support renewable energy integration.
