-----  
How much energy does Togo use?

In total, electricity supply of 1.162 GWh is thus achieved through distribution losses, resulting in a final electricity consumption of 876 GWh. Togo's total energy consumption is divided into three sectors. The largest share, 76%, is in the use of biomass, followed by petroleum products 20%. Only 4% of energy is used in the form of electricity.

Why is access to electricity important in Togo?

Togo recognizes that access to electricity is an essential element of its economic development and inclusive growth policy and is one of the major pillars that will enable the implementation of its new National Development Plan. Togo's ambition is to ensure universal access for all Togolese by 2030, with a 100% access rate over the next ten years.

Can Togo achieve universal access to electricity?

Demand for electricity in Togo has increased rapidly in line with economic growth, but energy production capacity remains insufficient to trigger structural transformation and private sector development. The progress made and the favourable outlook should help to achieve universal access to electricity, which the authorities have set for 2030.

Who is responsible for the energy sector in Togo?

Another important player in the energy sector is the Togolese Agency for Rural Electrification and Renewable Energies (AT2ER), a public institution, with financial autonomy. The agency is in charge of implementing the country's rural electrification policy, promoting and developing renewable energies.

The aim of this operation is to ensure the continuity of the public electricity service for the people of Togo and to support the country's economic and social development.

This report by ASSEDEL aims to raise awareness and encourage policy changes that will help Togo transition towards clean and affordable energy solutions, benefiting both its population and ...

There is potential for "energy leapfrogging," where Togo could advance directly to renewable solutions, akin to mobile telecommunications in other developing nations. However, financial barriers and ...

## Togo electricity safety

Despite progress made in energy production, the sector faces many challenges and constraints that hinder the achievement of the goal of universal access to electricity.

The upcoming maintenance work on the West African Gas Pipeline (WAGP), scheduled from February 5 to March 2, 2025, could affect electricity supply in Togo, Benin, and Ghana.

The project aims to reduce electricity supply shortages at a time of rapidly growing demand, to reduce Togo's dependence on electricity imports from neighboring countries and to expand access to ...

Access country profiles and data on electricity access, renewable energy, energy efficiency, and clean cooking to inform sustainable energy investments and reforms.
