Electricity from Sunlight Distributed vs Large-Scale Energy Production Types of PV Cells in Use Solar in Transportation Limitations of Solar Energy Which Locations Lead in Using Solar Energy to Make Electricity? Collecting Your Thoughts: Systems Thinking and Reflection Polycrystalline cells are made of bits or small chunks of the silica wafers, arranged in a random pattern. They are cheaper to produce, but less efficient than monocrystalline cells. They appear blue, as they do reflect some of that portion of the spectrum. The random orientation means they are better at working under diffuse light conditions, such...
