What is a PV module?

PV modules are known as solar panels or solar electric panels. We'll be using the terms interchangeably throughout this article although "PV module" is the more technically correct terminology. Solar panels provide electricity from sunlight.

What components are needed in a PV system?

PV components are needed in every PV system - beyond the major components such as the PV modules, inverters, and racking. This includes, but is not limited to wiring, conduit, junction boxes, connectors, cables, and monitoring equipment.

How much does a PV system cost?

The price of most large residential or commercial PV modules can range between \$2.20 and \$3.40 per rated watt. In PV system terminology, everything besides the PV modules themselves is called "balance of system" or BOS. We'll go over the main BOS components below, one at a time, in the direction of electricity flow through a typical system.

With USD20 million as first phase investment, Shanghai alex solar energy science & technology Co., Ltd. is dedicated to the R&D, manufacture, sale and technical services of crystalline silicon solar ...
