We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Each quarter, NREL conducts a presentation of technical trends within the solar industry.

All renewable energy sources, including wind + solar, produced more than a quarter of US electrical generation in Q1 2025 and provided nearly a third of total US electrical generation in...

In an impressive demonstration of renewable energy's growth, solar and wind sources accounted for nearly 98% of the new electrical generating capacity added in the United States during ...

According to the latest Federal Energy Regulatory Commission (FERC) data reviewed by the SUN DAY Campaign, solar and wind energy accounted for nearly 98% of new U.S. power ...

In the first quarter of 2025, electrical generation by wind plus utility-scale and small-scale solar provided nearly one-fifth (19.0%) of the U.S. total, up from 17.0% during the first three months ...

The Federal Energy Regulatory Commission (FERC) has reported a remarkable milestone in the U.S. energy landscape, revealing that solar and wind energy together accounted for ...

Solar led the way for clean energy installations with 4.4 GW added in Q1, followed by energy storage with a quarterly record of 1.6 GW and wind with 1.3 GW. The 4.4 GW of solar added...

Interested in earlier trends and analysis of new power plant capacity? Check out our archive, illustrating how electricity generation has changed in previous quarters and years.

"The first quarter of 2024 set the pace for the year, underscoring both an industry that continues to break

Wind and photovoltaic power generation in the first quarter

barriers and the increasing demand for clean energy solutions," said John ...
