What types of energy storage systems are suitable for wind power plants?

Electrochemical, mechanical, electrical, and hybrid systems are commonly used as energy storage systems for renewable energy sources [3,4,5,6,7,8,9,10,11,12,13,14,15,16]. In an overview of ESS technologies is provided with respect to their suitability for wind power plants.

Can multi-storage systems be used in wind and photovoltaic systems?

The development of multi-storage systems in wind and photovoltaic systems is a crucial area of research that can help overcome the variability and intermittency of renewable energy sources, ensuring a more stable and reliable power supply. The main contributions and novelty of this study can be summarized as follows:

What is co-locating energy storage with a wind power plant?

Co-locating energy storage with a wind power plant allows the uncertain, time-varying electric power output from wind turbines to be smoothed out, enabling reliable, dispatchable energy for local loads to the local microgrid or the larger grid.

What is a wind storage system?

A storage system, such as a Li-ion battery, can help maintain balance of variable wind power output within system constraints, delivering firm power that is easy to integrate with other generators or the grid. The size and use of storage depend on the intended application and the configuration of the wind devices.
